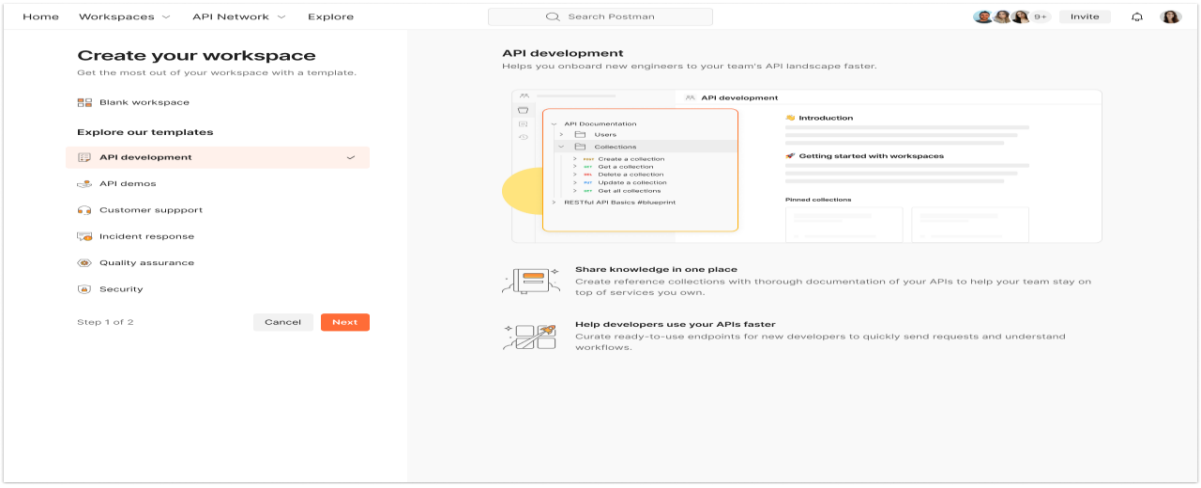
POSTMAN NAVIGATIONS

Postman workspaces



Postman workspaces are nothing but different folders where you can organise your ape request, collections and environments

You can have different workspaces for different projects

DEFINATION OF POSTMAN WORKSPACES

A workspace is a virtual office where you can keep all your API

Request, collections and environments and other related items organized

PURPOSE OF WORKSPACES

Workspaces helps you organise your work and keep different projects separate from each other

TYPES OF WORKSPACES

Personal workspaces

Team workspaces

Access control in workspaces

You can easily create access control to workspaces

You can define you can invite the team and also check what level of access they have to the workspaces

Benefits

Workspaces helps you stay organised manage APIs projects efficiently collaborate and coordinate
