

## CREATING REQUEST

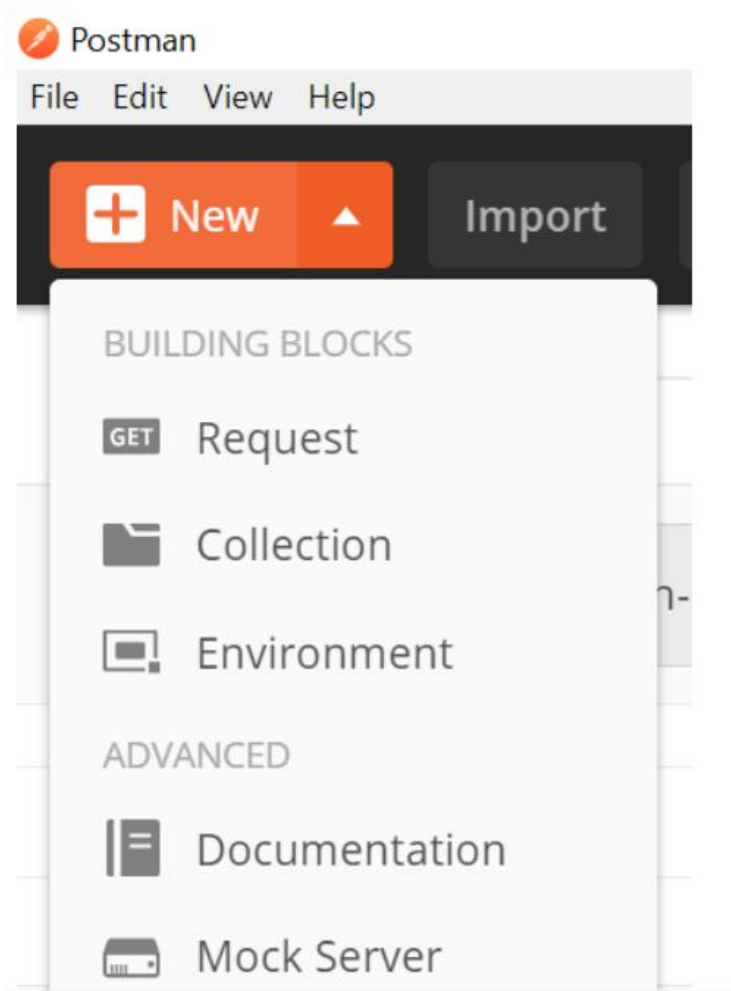

Creating a request in postman , in request we can have many details and during the request creation process you have to enter the url and select the method

Other than that you can optionally specify the number of additional information

### FOR CREATING THE REQUEST

1. Launch the postman
2. Click on new option from the top left corner of the postman homepage window
3. Once you click dropdown menu will be open
4. Click on request

**Step 3.** Click on the Request option from the drop-down

Once you have selected this you can add in information such as request name, request decryption and select the collection etc.

Save the request

Once you click the save button a new tab will be open with the name given on the request  
Step 7: enter [www.javapoint.com](http://www.javapoint.com) in address bar and send
